ELEMENTS OF WOVEN FABRIC DESIGN

1. A warp yarn passing over two or more consecutive weft yarns is called a

A) Weft float

B) Warp float

C) Repeat

D) Intersection

Answer: B) Warp float

2. The smallest unit that reproduces the complete design is the

A) Repeat

B) Draft

C) Tie-up

D) Reed plan

Answer: A) Repeat

3. The arrangement of warp ends through the heald eyes is the

A) Peg plan

B) Reed plan

C) Draft

D) Tie-up plan

Answer: C) Draft

4. The lifting plan showing which heald shafts are raised for each pick is the

A) Reed plan

B) Peg plan

C) Design

D) Draft

Answer: B) Peg plan

5. A reed plan shows the

A) Order of drawing ends through heald eyes

B) Lifting sequence of shafts

C) Connection of treadles to shafts

D) Distribution of warp ends through the reed dents

Answer: D) Distribution of warp ends through the reed dents

6. In design notation, warp over weft is shown by a

A) Empty square

B) Dot

C) Filled square

D) Cross

Answer: C) Filled square

7. In design notation, a horizontal row usually represents successive

A) Picks

B) Warp ends

C) Heald shafts

D) Dents

Answer: A) Picks

8. A straight draft is suitable for

A) Brocade only

B) Leno only

C) Diamond weaves only

D) Plain, twill and many simple weaves

Answer: D) Plain, twill and many simple weaves

9. A draft that proceeds forward and then reverses is a

A) Straight draft

B) Skip draft

C) Pointed draft

D) Divided draft

Answer: C) Pointed draft

10. The tie-up plan connects

A) Warp and weft

B) Treadles and heald shafts

C) Reed and dents

D) Warp beam and cloth roll

Answer: B) Treadles and heald shafts

COLOUR-AND-WEAVE EFFECT

11. Colour-and-weave effects are produced by

A) Yarn colour plus interlacement

B) Printing

C) Finishing

D) Embossing

Answer: A) Yarn colour plus interlacement

12. Alternating coloured warp ends produce

A) Weft stripes

B) Warp stripes

C) Uniform appearance

D) Leno effect

Answer: B) Warp stripes

13. Alternating coloured picks produce

A) Warp stripes

B) Uniform appearance

C) Leno effect

D) Weft stripes

Answer: D) Weft stripes

PLAIN WEAVE AND ITS DERIVATIVES

14. The basic repeat of plain weave is

A) 1 end × 2 picks

B) 3 ends × 3 picks

C) 2 ends × 2 picks

D) 4 ends × 4 picks

Answer: C) 2 ends × 2 picks

15. Plain weave has

A) The minimum number of intersections

B) The maximum number of intersections

C) No intersections

D) Long floats

Answer: B) The maximum number of intersections

16. Calico, muslin, cambric and poplin are made in

A) Plain weave

B) Satin weave

C) Terry weave

D) Velvet weave

Answer: A) Plain weave

17. In a warp rib, the

A) Warp is coarser

B) Warp and weft are equal

C) Extra pile ends are used

D) Weft is coarser or fewer picks are used

Answer: A) Warp is coarser

18. Matt or basket weave is a derivative in which

A) One end goes up and one down

B) Two or more warp and weft yarns interlace as groups

C) A diagonal line is formed

D) Long floats dominate

Answer: B) Two or more warp and weft yarns interlace as groups

19. A 2 × 2 matt is an example of

A) Basket weave

B) Twill

C) Satin

D) Leno

Answer: A) Basket weave

TWILL WEAVE

20. Twill is recognised by

A) A pebbled surface

B) A cellular surface

C) A diagonal line

D) An open structure

Answer: C) A diagonal line

21. In a 2/1 twill, the warp floats

A) Over two wefts and under one weft

B) Over one weft and under two wefts

C) Over two and under two

D) Over three and under one

Answer: A) Over two wefts and under one weft

22. Denim, gabardine and drill are typical

A) Muslin fabrics

B) Calico fabrics

C) Voile fabrics

D) Twill fabrics

Answer: D) Twill fabrics

23. A right-hand twill has a diagonal running

A) Upward from right to left

B) Upward from left to right

C) Horizontally

D) In a zigzag

Answer: B) Upward from left to right

24. In a balanced twill,

A) Warp floats predominate

B) Weft floats predominate

C) Warp and weft floats are equal

D) The diagonal is interrupted

Answer: C) Warp and weft floats are equal

25. Herringbone is produced by

A) A broken and reversed twill

B) A sateen weave

C) A plain weave

D) A crepe weave

Answer: A) A broken and reversed twill

26. Compared with plain weave, twill has

A) More interlacements

B) The same interlacements

C) The maximum interlacements

D) Fewer interlacements

Answer: D) Fewer interlacements

SATIN AND SATEEN

27. The dominant surface of satin is

A) Weft

B) Warp

C) Both equally

D) Pile

Answer: B) Warp

28. Sateen is generally

A) Weft-faced

B) Warp-faced

C) Pile-faced

D) Leno-faced

Answer: A) Weft-faced

29. In satin construction, adjacent floats should not form

A) Plain lines

B) Dots

C) Continuous twill lines

D) Stripes

Answer: C) Continuous twill lines

30. In satin construction, the binding points are

A) Placed in a diagonal line

B) Grouped together

C) Absent

D) Scattered over the repeat

Answer: D) Scattered over the repeat

31. A disadvantage of satin is

A) Poor drape

B) Lower abrasion resistance due to long floats

C) Very high firmness

D) An open structure

Answer: B) Lower abrasion resistance due to long floats

SPECIAL WEAVES

32. A crepe weave gives a

A) Smooth surface

B) Cellular surface

C) Pebbly or crinkled surface

D) Corded surface

Answer: C) Pebbly or crinkled surface

33. Which of the following produces a crinkled crepe appearance?

A) High-twist yarns

B) Low-twist yarns

C) Filament yarns without twist

D) Coarse weft only

Answer: A) High-twist yarns

34. Honeycomb weave has

A) An open mesh effect

B) A cellular effect with ridges and depressed centres

C) A corded effect

D) A cut-pile effect

Answer: B) A cellular effect with ridges and depressed centres

35. Brighton honeycomb differs from ordinary honeycomb in having

A) An open structure

B) A pile surface

C) Two fabric layers

D) A more pronounced cellular effect and ridges

Answer: D) A more pronounced cellular effect and ridges

36. In mock-leno,

A) Warp ends do not physically cross

B) Warp ends cross around each other

C) A doup is required

D) A pile warp is used

Answer: A) Warp ends do not physically cross

37. Mock-leno can be produced using

A) A doup attachment

B) A terry motion

C) Ordinary heald shafts

D) A drop box only

Answer: C) Ordinary heald shafts

38. Huck-a-back is commonly used for

A) Overcoats

B) Towelling

C) Nets

D) Velvet

Answer: B) Towelling

39. Bedford cord has

A) Transverse ribs

B) Loops on the surface

C) Cut pile

D) Prominent lengthwise (warp) ribs

Answer: D) Prominent lengthwise (warp) ribs

40. Welt structures usually produce

A) Transverse ribs from weft floats

B) Longitudinal ribs

C) Open mesh

D) Pile loops

Answer: A) Transverse ribs from weft floats

41. Piqué is a fabric having

A) An open leno mesh

B) A smooth satin surface

C) Raised cords, wales or embossed effects

D) A cut-pile surface

Answer: C) Raised cords, wales or embossed effects

BACKED, DOUBLE AND TRIPLE CLOTH

42. Warp-backed cloth uses

A) Two series of weft yarns

B) A pile warp only

C) Three fabric layers

D) Two series of warp ends

Answer: D) Two series of warp ends

43. Double cloth consists of

A) One layer with extra weft

B) Two separate layers woven together in one operation

C) Three layers

D) A pile and a ground only

Answer: B) Two separate layers woven together in one operation

44. Double cloth normally requires

A) Two warp and two weft systems

B) One warp and one weft system

C) Three warp and three weft systems

D) Only an extra weft

Answer: A) Two warp and two weft systems

45. Triple cloth consists of

A) One layer

B) Two layers

C) Three layers

D) Four layers

Answer: C) Three layers

46. A limitation of double cloth is

A) Low thickness

B) Poor warmth

C) Inability to make reversible designs

D) More complex loom and shedding requirements

Answer: D) More complex loom and shedding requirements

EXTRA WARP AND EXTRA WEFT FIGURING

47. In lappet figuring, the extra warp is supplied by

A) Dobby cards

B) Lappet bars

C) A doup

D) A terry motion

Answer: B) Lappet bars

48. In cut extra weft figuring,

A) Unwanted floats are cut after weaving

B) Floats are never removed

C) Warp floats are cut on the loom

D) The ground warp is cut

Answer: A) Unwanted floats are cut after weaving

49. A common issue in extra warp figuring is

A) Weft slippage

B) Reed marks

C) Long warp floats and tension control

D) Weft bars

Answer: C) Long warp floats and tension control

TERRY, VELVET AND VELVETEEN

50. Terry pile is formed by

A) The weft only

B) A single warp system

C) A leno doup

D) A separate pile warp

Answer: D) A separate pile warp

51. In a three-pick terry weave, the third pick

A) Forms the first loop

B) Acts as a binding or securing pick

C) Is omitted

D) Is cut

Answer: B) Acts as a binding or securing pick

52. A four-pick terry weave is commonly used where

A) Greater pile security is needed

B) A flat fabric is needed

C) An open structure is needed

D) A cut pile is needed

Answer: A) Greater pile security is needed

53. Velvet pile can be formed by

A) The leno method only

B) The lappet method only

C) The double-cloth method or the wire method

D) The mock-leno method

Answer: C) The double-cloth method or the wire method

54. Velveteen is generally a

A) Silk filament pile fabric

B) Terry loop fabric

C) Leno fabric

D) Cotton or cellulosic cut-pile fabric

Answer: D) Cotton or cellulosic cut-pile fabric

LENO AND GAUZE

55. Leno is an open structure in which

A) Warp ends never cross

B) Two or more adjacent warp ends cross around the weft

C) Weft ends cross each other

D) Only pile yarns are used

Answer: B) Two or more adjacent warp ends cross around the weft

56. True leno requires

A) A doup or leno motion

B) A terry motion

C) A drop box

D) A projectile

Answer: A) A doup or leno motion

57. A major property of true leno is

A) High yarn slippage

B) Very low strength

C) Low yarn slippage due to firm interlacement

D) Heavy weight

Answer: C) Low yarn slippage due to firm interlacement

58. Gauze is

A) A heavy, dense fabric

B) A cut-pile fabric

C) A double-layer fabric

D) A light, open, porous fabric

Answer: D) A light, open, porous fabric

59. The difference between true leno and mock-leno is that in true leno

A) Ordinary heald shafts are sufficient

B) Warp ends physically cross

C) The structure is an imitation only

D) Slippage is more likely

Answer: B) Warp ends physically cross

60. Spot leno is a structure in which

A) The leno effect appears in selected areas only

B) The leno effect covers the whole fabric

C) Pile loops are formed in spots

D) Extra weft is cut

Answer: A) The leno effect appears in selected areas only
