Knitting Basics

1. Knitting is the process of forming fabric by

A) Interlacing warp and weft at right angles

B) Intermeshing yarns into loops

C) Bonding fibres with adhesive

D) Felting fibres

Answer: B) Intermeshing yarns into loops

2. A horizontal row of loops in knitted fabric is called a

A) Wale

B) Course

C) Gauge

D) Stitch length

Answer: B) Course

3. A vertical column of loops is called a

A) Course

B) Cam

C) Wale

D) Sinker

Answer: C) Wale

4. Gauge in knitting is the

A) Length of yarn in one loop

B) Number of needles per unit width

C) Width of fabric

D) Take-down tension

Answer: B) Number of needles per unit width

5. Compared with woven fabric, knitted fabric is generally

A) Less stretchable

B) More stretchable

C) Always stiffer

D) Free from curling

Answer: B) More stretchable

6. Which fabric generally needs less yarn preparation?

A) Woven fabric, because of sizing

B) Both need identical preparation

C) Knitted fabric

D) Neither needs preparation

Answer: C) Knitted fabric

Knitting Elements and Terms

7. The latch in a latch needle

A) Holds down the fabric

B) Opens and closes the needle hook

C) Controls needle timing

D) Pulls fabric away

Answer: B) Opens and closes the needle hook

8. The sinker

A) Draws yarn through the old loop

B) Guides yarn to needles

C) Controls needle movement

D) Holds down the fabric and helps loop formation

Answer: D) Holds down the fabric and helps loop formation

9. The cam in a knitting machine

A) Controls the movement and timing of needles

B) Collects the fabric

C) Holds yarn packages

D) Guides warp yarns

Answer: A) Controls the movement and timing of needles

10. The guide bar is used in a

A) Weft-knitting machine

B) Warp-knitting machine

C) Loom

D) Sewing machine

Answer: B) Warp-knitting machine

11. The take-down mechanism

A) Feeds yarn to needles

B) Opens the latch

C) Pulls the knitted fabric away from the knitting zone

D) Forms the loop

Answer: C) Pulls the knitted fabric away from the knitting zone

12. Stitch length is the

A) Number of needles per inch

B) Width of the fabric

C) Distance between needles

D) Length of yarn used to form one loop

Answer: D) Length of yarn used to form one loop

13. Laddering or running means

A) Curling of the edge

B) Unravelling of a line of loops

C) Increase in stitch length

D) Shrinkage of fabric

Answer: B) Unravelling of a line of loops

14. In the loop-formation sequence, after the new yarn is laid across the needle, it is

A) Cut

B) Knotted

C) Drawn through the old loop

D) Released without movement

Answer: C) Drawn through the old loop

Weft-Knitted Structures

15. Plain (single jersey) is knitted on

A) One needle bed

B) Three needle beds

C) A guide bar only

D) A loom

Answer: A) One needle bed

16. Plain knit fabric commonly

A) Never curls

B) Has the same face and back

C) Is very thick and stable

D) Curls at the edges and may ladder

Answer: D) Curls at the edges and may ladder

17. Rib structure has

A) Only knit loops

B) Alternate knit and purl wales

C) Alternate knit and purl courses

D) Only purl loops

Answer: B) Alternate knit and purl wales

18. Rib fabric is commonly used for

A) Linings

B) Lingerie nets

C) Cuffs, neckbands and waistbands

D) Curtains

Answer: C) Cuffs, neckbands and waistbands

19. Interlock is made by

A) Knitting two rib structures together

B) Knitting two plain structures on one bed

C) Using guide bars

D) Using a leno doup

Answer: A) Knitting two rib structures together

20. A feature of interlock is that it

A) Has different face and back

B) Looks similar on both sides and is stable

C) Is thinner than plain

D) Curls badly

Answer: B) Looks similar on both sides and is stable

21. Purl structure has

A) Only vertical wales of knit loops

B) Alternate knit and purl wales

C) Alternate courses of knit and purl loops

D) Warp-knit lapping

Answer: C) Alternate courses of knit and purl loops

22. In plain knitting, the face commonly shows

A) Curved purl-like loops

B) Horizontal bars only

C) Pile loops

D) Vertical V shapes

Answer: D) Vertical V shapes

Warp-Knitted Structures

23. Warp-knitting yarns are supplied from

A) Cones on a creel only

B) Pirns

C) Beams

D) Cheeses on a drum

Answer: C) Beams

24. Tricot is commonly used for

A) Lingerie and linings

B) Heavy overcoats

C) Cuffs

D) Terry towels

Answer: A) Lingerie and linings

25. Locknit is

A) A plain weft-knit

B) A tricot-based structure with loops locked together

C) A rib structure

D) A woven structure

Answer: B) A tricot-based structure with loops locked together

26. Sharkskin is a warp-knit pattern with

A) A smooth flat surface

B) An open mesh surface

C) A pile surface

D) A textured or zigzag surface

Answer: D) A textured or zigzag surface

Garment Production

27. Grey fabric is fabric

A) After dyeing

B) After printing

C) In its unfinished state, before bleaching or dyeing

D) After finishing

Answer: C) In its unfinished state, before bleaching or dyeing

28. The four-point system assigns penalty points according to

A) Defect length

B) Fabric colour

C) Fabric weight only

D) Yarn count

Answer: A) Defect length

29. The four-point score is calculated per

A) Metre only

B) 100 square yards or another specified area

C) Roll only

D) Garment

Answer: B) 100 square yards or another specified area

30. Which is a knitting fault?

A) Missing pick

B) Float

C) Dropped stitch

D) Reed mark

Answer: C) Dropped stitch

31. Bow and skew means

A) Distortion of courses or weft across the fabric width

B) A thick yarn

C) An oil stain

D) A missing end

Answer: A) Distortion of courses or weft across the fabric width

32. Ease in a garment is the

A) Reduction of body size

B) Seam allowance

C) Stitch density

D) Extra room added for movement, comfort and style

Answer: D) Extra room added for movement, comfort and style

33. Grading is the

A) Preparation of a first pattern

B) Systematic increase or decrease of a base pattern to produce other sizes

C) Cutting of fabric

D) Inspection of fabric

Answer: B) Systematic increase or decrease of a base pattern to produce other sizes

34. Grading does not

A) Change garment size

B) Use a size chart

C) Automatically correct a poor-fitting base pattern

D) Use grade increments

Answer: C) Automatically correct a poor-fitting base pattern

35. Spreading is the

A) Joining of garment parts

B) Arrangement of fabric plies in layers before cutting

C) Measurement of body size

D) Packing of garments

Answer: B) Arrangement of fabric plies in layers before cutting

36. Seam allowance is the fabric

A) Between the seam line and the cut edge

B) Added only at the hem

C) Removed after sewing

D) Used for buttons

Answer: A) Between the seam line and the cut edge

Handloom Developments

37. A solid border is a border that is

A) Printed after weaving

B) Stitched after weaving

C) Woven firmly with the body fabric

D) Dyed separately

Answer: C) Woven firmly with the body fabric

38. Multiple putta weaving places

A) A single motif only at the border

B) Repeated motifs at planned positions across the fabric

C) Only plain stripes

D) Cut pile on the surface

Answer: B) Repeated motifs at planned positions across the fabric

39. Electronic Jacquard is a

A) Mechanical cam system

B) Hand-operated pattern card system only

C) Terry mechanism

D) Computer-controlled pattern-selection system for warp threads

Answer: D) Computer-controlled pattern-selection system for warp threads

40. An advantage of electronic Jacquard on handlooms is

A) Reduced dependence on physical pattern cards

B) Complete removal of the weaver

C) Reduced design capability

D) Inability to repeat patterns

Answer: A) Reduced dependence on physical pattern cards
