Nonwoven Fabrics

1. A nonwoven fabric is a sheet or web of fibres bonded by

A) Weaving only

B) Knitting only

C) Mechanical, thermal or chemical means

D) Sewing only

Answer: C) Mechanical, thermal or chemical means

2. Needle-punched felts are examples of

A) Chemically bonded nonwovens

B) Mechanically bonded nonwovens

C) Thermally bonded nonwovens

D) Hydroentangled nonwovens

Answer: B) Mechanically bonded nonwovens

3. Hydroentangled (spunlaced) nonwovens are made using

A) Heat

B) Adhesives

C) Stitching yarns

D) High-pressure water jets

Answer: D) High-pressure water jets

4. In stitch-bonded nonwovens, the fibre web is held together by

A) Stitching yarns

B) Water jets

C) Heat

D) Binder only

Answer: A) Stitching yarns

5. Thermal bonding uses

A) Adhesive binders

B) Heat to soften thermoplastic or binder fibres

C) Needles

D) Water pressure

Answer: B) Heat to soften thermoplastic or binder fibres

6. Chemical bonding uses

A) Heat only

B) Entanglement by needles

C) Adhesives or chemical binders

D) Water jets

Answer: C) Adhesives or chemical binders

7. Which pair is correct?

A) Mechanical bonding – uses heat

B) Thermal bonding – uses a binder

C) Chemical bonding – entangles fibres

D) Mechanical bonding – entangles fibres

Answer: D) Mechanical bonding – entangles fibres

8. Nonwovens are commonly used for

A) Wipes, filters and medical products

B) Only shirting

C) Only sarees

D) Only denim

Answer: A) Wipes, filters and medical products

Technical Textiles and Medical Textiles

9. Technical textiles are designed mainly for

A) Fashion appearance

B) Performance and function

C) Decoration only

D) Colour effects

Answer: B) Performance and function

10. Technical textiles are grouped by

A) Yarn count

B) Loom type

C) End use

D) Fibre colour

Answer: C) End use

11. Bandages, wound dressings and surgical gowns are

A) Implantable medical textiles

B) Geotextiles

C) Agrotextiles

D) Non-implantable medical textiles

Answer: D) Non-implantable medical textiles

12. Sutures, vascular grafts and artificial ligaments are

A) Implantable medical textiles

B) Non-implantable medical textiles

C) Sports textiles

D) Protective textiles

Answer: A) Implantable medical textiles

13. The key requirement of implantable textiles is

A) Colourfastness

B) Biocompatibility, strength and safety

C) Shade matching

D) Low cost only

Answer: B) Biocompatibility, strength and safety

14. Biocompatibility means

A) High tensile strength

B) Resistance to fluids

C) Suitability for contact with the body without harmful effects

D) Absorbency

Answer: C) Suitability for contact with the body without harmful effects

15. Barrier protection means

A) Colour protection

B) Resistance to the passage of fluids or contaminants

C) Heat insulation

D) Sound absorption

Answer: B) Resistance to the passage of fluids or contaminants

Sports Textiles

16. Moisture management in sports textiles means

A) Storing sweat in the fabric

B) Making the fabric waterproof

C) Increasing fabric weight

D) Moving sweat away from the skin or helping it evaporate

Answer: D) Moving sweat away from the skin or helping it evaporate

17. Breathability allows

A) Air and water vapour to pass through

B) Only water to pass

C) No air to pass

D) Only light to pass

Answer: A) Air and water vapour to pass through

18. Stretch and recovery helps garments

A) Become permanently loose

B) Support movement and retain shape

C) Become stiffer

D) Lose elasticity

Answer: B) Support movement and retain shape

19. UV protection in sports textiles helps to

A) Increase weight

B) Improve absorbency

C) Reduce exposure to ultraviolet radiation

D) Reduce stretch

Answer: C) Reduce exposure to ultraviolet radiation

Geotextiles

20. Geotextiles are permeable textile materials used with

A) Human skin

B) Food products

C) Vehicle engines

D) Soil, rock or other civil-engineering materials

Answer: D) Soil, rock or other civil-engineering materials

21. Preventing two soil layers from mixing is

A) Separation

B) Filtration

C) Drainage

D) Protection

Answer: A) Separation

22. Allowing water to pass while retaining soil particles is

A) Separation

B) Filtration

C) Reinforcement

D) Protection

Answer: B) Filtration

23. Reinforcement in geotextiles

A) Improves soil stability by adding tensile support

B) Prevents water flow

C) Colours the soil

D) Reduces soil strength

Answer: A) Improves soil stability by adding tensile support

24. Geotextiles may be

A) Only woven

B) Only knitted

C) Woven, knitted or nonwoven

D) Only felted

Answer: C) Woven, knitted or nonwoven

Agrotextiles

25. Shade nets are used to

A) Increase heat

B) Reduce sunlight and heat exposure

C) Filter water

D) Reinforce soil

Answer: B) Reduce sunlight and heat exposure

26. Insect-proof nets are used to

A) Attract insects

B) Shade crops only

C) Cover roads

D) Protect crops from insects

Answer: D) Protect crops from insects

27. Ground covers and mulch fabrics help to

A) Increase weeds

B) Reduce weeds and help manage soil moisture

C) Remove soil moisture

D) Support vehicles

Answer: B) Reduce weeds and help manage soil moisture

28. Bird-protection nets are used to

A) Protect fruits and crops

B) Make shade

C) Reinforce embankments

D) Filter air

Answer: A) Protect fruits and crops

Automotive and Protective Textiles

29. Seat belts require

A) High strength and controlled elongation

B) Very high stretch

C) Low strength

D) Only softness

Answer: A) High strength and controlled elongation

30. Airbags require strength, reliability and

A) Complete impermeability

B) Complete openness

C) Controlled permeability

D) Heavy weight

Answer: C) Controlled permeability

31. Tyre-cord fabrics require

A) Low strength

B) High tensile strength and dimensional stability

C) High stretch only

D) Only softness

Answer: B) High tensile strength and dimensional stability

32. High-visibility protection is used for

A) Firefighting only

B) Chemical handling

C) Ballistic vests

D) Road work and emergency services

Answer: D) Road work and emergency services

33. Which statement is correct about protective clothing?

A) One fabric protects against all hazards

B) Protective clothing is hazard-specific

C) Protection does not depend on use

D) All protective fabrics are identical

Answer: B) Protective clothing is hazard-specific

Handloom Quality

34. In handloom fabric inspection, "ends and picks" refers to

A) Fabric colour

B) Fabric length

C) Required warp and weft density

D) Packing style

Answer: C) Required warp and weft density

35. Which is a quality check for handloom towels?

A) Even pile or loop formation

B) Presence of printed motifs

C) Presence of tie-dye dots

D) Presence of brocade only

Answer: A) Even pile or loop formation

Traditional Handloom Sarees

36. Banarasi sarees are associated with

A) Madurai

B) Arani

C) Kanchipuram

D) Varanasi

Answer: D) Varanasi

37. Banarasi sarees are known for

A) Tie-dyed dots

B) Silk brocade

C) Plain cotton weave

D) Nonwoven fabric

Answer: B) Silk brocade

38. Kanchipuram sarees are traditionally woven in

A) Silk with contrasting body, border and pallu

B) Nonwoven material

C) Jute only

D) Polyester only

Answer: A) Silk with contrasting body, border and pallu

39. Arani is a centre of

A) Brocade in Uttar Pradesh

B) Tie-dyed cotton

C) Tamil Nadu silk and silk-blend sarees

D) Terry towels

Answer: C) Tamil Nadu silk and silk-blend sarees

40. Sungudi sarees are known for

A) Silk brocade

B) Tie-dyed dots or small resist-dyed patterns

C) Metallic supplementary yarns

D) Cut-pile surface

Answer: B) Tie-dyed dots or small resist-dyed patterns
